Education

Honours B.S. in Computer Science, Specialization in Software Engineering

University of Toronto

- Expected Graduation: December 2027
- Relevant Coursework: Software Design, Computer Organization, Programming on the Web, Software Tools and System Programming, Design and Analysis of Data Structures, Human-Computer Interaction
- Exchange Semester: Kyoto University, Japan, April 2026 - Aug 2026

Technical Skills

- Languages: **C, C#, Python, Java, JavaScript, Typescript, PowerShell, Bash, SQL, YAML**
- Databases: **Oracle Database, MongoDB, PostgreSQL**
- Frameworks and Libraries: **.NET, React, Node.js, Express, Playwright**
- Tools: **Azure DevOps, Docker, Git, Informatica**

Experience

DevOps/.Net Developer Co-op

Sep 2024 – April 2025

Ontario Public Services Ministry of Public and Business Service Delivery and Procurement

- Created integration tests using **Playwright** and **.NET Core** for multiple applications and integrated them with **Azure Release Pipelines** for automatic deployments, reducing the need for manual testing
- Optimized a **Continuous Development pipeline** using **Azure Build Pipelines**, reducing execution time from 30 minutes to 10 minutes
- Designed and implemented **Azure DevOps deployment pipelines** with automated testing and deployment stages, reducing manual release effort
- Supported QA teams in troubleshooting deployment, environment and database issues, minimizing testing downtime that could lead to release delays
- Supported multiple ministries to modernize SDLC processes during migration from TFS to Azure DevOps through the adoption of deployment groups and pull request workflows
- Deployed Reporting and Validation applications on **Linux servers** and **Oracle Databases** using **Informatica PowerCenter Clients**
- Managed database deployments and flashbacks on **Oracle databases** using **SQL *Plus** and **SQL Developer**

Projects

RTC Web Application

Nov 2025

React, Typescript, Node.js, Express, MongoDB, Docker

- Developed a full-stack web application supporting real-time video calls and direct messaging between users
- Created user interface using **React** and **Material UI** and **RESTful APIs** with **Express** and **Node.js**
- Deployed application to a virtual **Linux** machine using **Docker** containers and configured a **NGINX** reverse proxy to manage production traffic
- Implemented secure user authentication for native user accounts with encrypted credential storage in **MongoDB** and **GitHub OAuth** integration
